

EQUIFORCE Lyte (liquid)

Restores energy and fluid balance

Highly palatable dietetic supplement that instantly compensates the loss of electrolytes and energy during competition, racing, or transport, and stimulates the intake of water. Administration directly after working/sweating instantly restores the fluid and energy balance which is vital for the well-being and performance of the sport horse.

Optimum hydration is the key to good performances

An optimum hydration of the body cells is crucial for a steady and consistent performance of the sport horse. If the horse becomes dehydrated his heart must work harder and the muscle and nerve function is disrupted. As a result of this the performances of the horse drop dramatically and his energy reserves are depleted faster than normal because it is harder for him to coordinate his limbs and movements. Severe dehydration can ultimately lead to impaction colic, kidney failure, and even collapse/death. In order to avoid dehydration performance horses must drink a lot of water *and* at the same time be compensated for the loss of electrolytes (salts) to maintain the electrolyte balance. Unfortunately, transport, stress, hard exercise, and new surroundings can make a horse prone to drink less water than needed in order to stay hydrated. Unwillingness to drink enough water can also make the horse less willing to eat hence draining his energy reserves and losing body weight.

Induces thirst and restores electrolyte and energy balance

EQUIFORCE Lyte liquid is an innovative dual-acting supplement. It is especially aimed at the sport horse and all the challenges he faces on his way, which is not only limited to the performance in the arena but also, for many horses; intensive travel, climate changes (hot/cold weather and/or changes in air humidity), stabling changes (during shows and travel), etc. All changes, regardless the experience of the horse (and the effort of the groom) can make the horse prone to drink less water than normal which has a negative impact on both the fluid and energy balance. Adequate supplementation, on the other hand, can help the horse to sustain his fluid and energy balance, despite intensive training, traveling and shows. EQUIFORCE Lyte liquid contains equally high amounts of both energy and electrolytes, in concentrations much higher than in similar products due to a special manufacturing process called supersaturation. The energy is 100 % pure meritose which has the fastest absorbance of all carbohydrates in horses, making the horse able to restore his energy reserves faster. Meritose also adds a great taste, making the product well accepted by horses. The electrolytes in the product are all water-soluble and combined in a ratio that corresponds to their ratio found in the sweat of the horse hence compensating sweat losses in the optimum way. Regular use encourages the horse to drink enough water, adding to the well-being and ability to perform at his best, also when performing over more days during a show.

Daily dose: For horses: light work (minimum sweating): 50 ml, medium work (normal sweating): 75 ml, hard/intensive work (heavy sweating, long transport, or hot weather): 100 ml. For ponies: reduce the dose according to size/weight of the pony. The dose can be doubled for 1-3 days during shows, and other periods with intensive work, travel, hot weather, or other situations where the intake of water needs to be stimulated. Always assure access to fresh drinking water. Pour/pump on feed ration or administer directly in the horse's mouth with a plastic syringe. 1 pump stroke = 25 ml. Do NOT add in the drinking water. Consult a nutrition expert before use and/or before exceeding the period of use or dose.

Composition: water, sodium chloride, meritose, potassium chloride, magnesium chloride, calcium chloride.

Analysis: Analysis: water: 45 %, crude protein: 0 %, crude fat: 0 %, crude fibre: 0 %, crude ash: 41,2%, sodium(Na): 6,2 %, magnesium(Mg): 0,9 %.

Additives per liter: Preservation: citric acid (E 330).

Specification	per liter	per 100 ml	per 75 ml	per 50 ml
Chloride(Cl)	195 g	19,5 g	14,6 g	9,8 g
Meritose	156 g	15,6 g	11,7 g	7,8 g
Sodium(Na)	76 g	7,6 g	5,7 g	3,8 g
Potassium(K)	41 g	4,1 g	3,1 g	2,1 g
Magnesium(Mg)	11 g	1,1 g	0,8 g	0,6 g
Calcium(Ca)	8 g	0,8 g	0,6 g	0,4 g

Feed category: Dietetic complementary feed for horses.

Note: Contains no substances prohibited by the FEI or The British Jockey Club.

Storage: In closed can, away from sunlight.

Packaging:

- 1 liter can (twin neck)
- 5 liter can (25 ml pump available)
- 10 liter can (25 ml pump available)
